

OOP 2 LOGIN

學號：A1123327

姓名：陳佳思

AI 生成的程式主要問題是登入失敗時沒有任何提示，使用者無法知道登入是否成功。因此，我加入 JOptionPane 來顯示登入成功或失敗的訊息，讓程式的操作結果更加清楚，也讓使用者更容易使用。

English Translation

Title:

Ask AI to generate the result of a login window with input fields and a button.

The program creates a simple Java Swing login window with:

- Username input
- Password input
- Login button
- If username and password are correct, it prints "Login successful".

Java Code

```
// Java

import javax.swing.*;
import java.awt.*;

public class BadLogin extends JFrame {

    public BadLogin() {
        setTitle("Login");
        setSize(300, 200);
        setLayout(null);
        setLocationRelativeTo(null);
        setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

        JLabel l1 = new JLabel("Username:");
        JTextField t1 = new JTextField();

        JLabel l2 = new JLabel("Password:");
        JTextField t2 = new JTextField();

        JButton btn = new JButton("Login");

        l1.setBounds(50, 50, 80, 25);
        t1.setBounds(110, 50, 140, 25);

        l2.setBounds(50, 70, 80, 25);
        t2.setBounds(110, 70, 140, 25);

        btn.setBounds(180, 110, 100, 30);

        add(l1);
        add(t1);
        add(l2);
        add(t2);
        add(btn);

        btn.addActionListener(e -> {
            if (t1.getText().equals("admin")
```

Java

```
l1.setBounds(30, 30, 80, 25);
t1.setBounds(110, 30, 140, 25);

l2.setBounds(30, 70, 80, 25);
t2.setBounds(110, 70, 140, 25);

btn.setBounds(100, 110, 100, 30);

add(l1);
add(t1);
add(l2);
add(t2);
add(btn);

btn.addActionListener(e -> {
    if (t1.getText().equals("admin")
        && t2.getText().equals("admin")) {
        System.out.println("Login successful");
    }
});

setVisible(true);
}

public static void main(String[] args) {
    new SsdLogin();
}
```

Important correction

The AI-generated code in the picture has a problem here:

Java

```
if (t1.getText() == "admin")
```

For comparing `String` values in Java, it should use:

Java

```
t1.getText().equals("admin")
```

So the corrected version is:

Java

```
if (t1.getText().equals("admin")
    && t2.getText().equals("admin")) {
    System.out.println("Login successful");
}
```
